Lahore, Pakistan | SheikhAliHaider056@gmail.com | +92 306 4801668 | [LinkedIn](#) | [Github](#)

SUMMARY

AI Engineer and Computer Science graduate specializing in LLM applications, multi-modal AI systems, RAG pipelines, and AI-powered automation. Experienced in building production-ready AI solutions using FastAPI, Docker, PostgreSQL, Vector Databases, and modern foundation models. Strong background in machine learning, NLP, computer vision, and scalable backend systems with a focus on real-world AI deployment.

PROFESSIONAL EXPERIENCE

PMIU-PESRP Data Analyst Intern

June 2024 - Aug 2024

- Cleaned and validated more than 500 student records across 2 districts, reducing data inconsistencies by 30% for PESRP policy reporting
- Built 4 interactive Power BI dashboards tracking school enrollment, teacher attendance, and literacy KPIs, adopted by department heads for monthly reviews
- Performed data preprocessing and transformation using Excel and Python, improving data readiness for analysis and reporting workflows

PROJECT EXPERIENCE

Final Year Project: AI-Powered Multi-Modal Assignment Grading System

Oct 2025 - May 2026

- Architected a multi-modal AI evaluation platform capable of assessing source code, PDFs, DOCX files, and handwritten submissions through a unified grading workflow.
- Integrated Groq-hosted LLMs with custom prompt pipelines to generate grading decisions, rubric-based scoring, readability analysis, and actionable feedback.
- Designed asynchronous processing infrastructure using Celery, Redis, and Docker sandboxing to securely execute and evaluate programming assignments.
- Built scalable FastAPI services with JWT authentication, role-based authorization, and PostgreSQL-backed learning management workflows.
- Developed a React dashboard providing real-time submission tracking, AI-generated insights, and grading transparency for instructors and students.

StudyOS — AI Study Optimization Platform

May 2026 – June 2026

- Eliminated study inefficiency by building StudyOS, an AI-powered learning platform (React 19, Supabase, Gemini 2.0 Flash) that auto-processes PDF/DOCX/PPTX files into structured revision content, reducing manual note-making to zero.
- Solved unstructured self-testing by engineering an automated AI pipeline that generates 5 summary formats, flashcards, and document-grounded quizzes, enabling syllabus-accurate practice at scale.
- Removed guesswork from revision by designing a weighted Mastery Score engine (quiz accuracy $\times$ 0.4, flashcard performance $\times$ 0.25, revision frequency $\times$ 0.20, study time $\times$ 0.15) that categorizes every topic as Weak/Learning/Strong/Mastered.
- Fixed lack of personalized guidance by developing a context-aware AI Tutor grounded in the user's own uploaded documents, backed by a normalized 20+ table PostgreSQL schema for full session persistence.
- Turned raw progress data into actionable focus by implementing a Recharts analytics dashboard with streak tracking

SKILLS

Programming: Python, JavaScript, C++

Backend Development: Django, FastAPI (learning), REST APIs, Server-side logic

Frontend: React.js (working knowledge), HTML, CSS, JS, Node.js

AI & Machine Learning: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, Vector Embeddings, Semantic Search, NLP, Computer Vision, Reinforcement Learning, Fine-Tuning Concepts, Model Evaluation

Frameworks: PyTorch, Scikit-Learn, Hugging Face Transformers, LangChain, FastAPI, Django

AI Infrastructure: Docker, Redis, Celery, PostgreSQL, Git, Linux

Soft Skills: Problem-Solving, Team Collaboration, Communication, Adaptability

EDUCATION

University of Management and Technology

Bachelor of Computer Science CGPA: 3.42

Relevant Coursework: Machine Learning, Artificial Intelligence, Data Structures & Algorithms, Database Systems, Software Engineering, Computer Vision, Natural Language Processing
